

Tibial Tuberosity Advancement

Workshop Overview:

By taking the MMP for Tibial Tuberosity Advancement course, it will widen your offering to your patients in your practice in varying situations regarding cruciate ligament disease referral.

 1 Day Workshop  Online Course Required

Workshop Objectives:

- To help you effectively resolve CCLD lameness using MMP for TTA.
- Learn TTA fundamentals, critical case selection, manage complications and achieve repeatable and successful clinical outcomes.
- To make MMP TTA achievable by you in your own practices without the need for referral.

How will I feel after this workshop?

- Confident to perform the surgery and aware of the ongoing preoperative, intraoperative, and postoperative support from the company and the instructors.
- Provided with the essential knowledge and practical experience needed to excel in this crucial orthopaedic procedure.
- Confident in widening your offering to your patients in your practices.

Why learning TTA featuring MMP would be suitable for your practice:

MMP can be considered a starting avenue for expanding your repertoire into canine cruciate ligament surgery.

When a vast majority of CCLD are not being seen for referral, the best option for cruciate surgery needs to be available on offer to the patient. The MMP was developed many years ago with this in mind.

A procedure that follows a step-by-step guide, is easier to do than TPLO yet also has a similar outcome, and is repeatedly achievable in your own practice!

While complications do occur as with any surgical procedure, they are well recognised, often predictable and preventable, and more importantly, correctable without the need for referral.
